For Immediate Release

**ELIMINATE CASE SEALING SAFETY HAZARDS WITH
FULLY GUARDED MODEL 136 SEALER**

Tarpon Springs, FL – Today, packagers are challenged to do more with less, yet they can't ignore employee safety, a potentially costly issue when purchasing case sealing equipment. A-B-C offers a solution in its Model 136 case taper, an economical sealer that includes complete safety guarding in the base price of the machine. The full-enclosure guards enclose the machine, shielding employees from all dangerous operating mechanisms- when a guard is opened the machine operation immediately stops. This helps packagers reduce liability, meet safety standards, and provide a safer plant environment.

For additional protection, the Model 136 is designed to minimize employee intervention, with all changeover adjustments completed by hand cranks on the outside of the machine frame. The tape system is specially positioned for quick and easy roll replenishment. The sealer has a heavy stainless steel box frame, welded and bolted for strength and durability.

For complete details on the Model 136 or A-B-C's line of case erectors, sealers, packers, palletizers, depalletizers, or specialty packaging machines, contact A-B-C Packaging Machine Corporation, 811 Live Oak Street, Tarpon Springs, FL 34689, Phone 800-237-5975, Fax 727-938-1239, or visit www.abcpackaging.com .
