**A-B-C OFFERS VERSATILE PALLET DISPENSER/STACKER
THAT RUNS FULL OR 1/2 PALLETS**

Tarpon Springs, FL – A-B-C has introduced a pallet dispenser and/or pallet stacker that offers maximum flexibility as it can automatically stack empty pallets after depalletizing, or dispense pallets for palletizing. What's more, this versatile pallet-handling device runs both conventional, full pallets, plus 1/2 pallets that are popular for end aisle displays or custom merchandising.

This system utilizes a unique side-clamp design that grips pallets securely while providing gentle handling, making it forgiving for pallets that are damaged or skewed. The lift and place design accommodates pallets with loose boards or protruding nails, problems that can cause malfunction on stripper-style pallet dispensers.

The self-contained unit ships ready for installation on the packaging line, with only electric and air connections required. The package includes a pallet handling mechanism with lift and clamp devices, heavy gauge steel framework, electric motor drive, and efficient micro PLC control. Chain or roller conveyor is provided depending on the application. This pallet handler has a lift capacity rating of up to 1,000 lbs.

A-B-C manufactures a complete line of packaging machinery including case erectors, sealers, packers, decasers, bulk depalletizers, and palletizers. For complete details, contact A-B-C Packaging Machine Corporation, 811 Live Oak Street, Tarpon Springs, FL 34689, Phone 800-237-5975, Fax 727-938-1239, or visit www.abcpackaging.com
